

**MAT 137Y – Practice problems**  
**Unit 4 : Transcendental functions**

1. Your location is a function of time. What are the domain, the codomain, and the range of this function?
2. Let  $f(x) = \frac{x+2}{x+1}$ .
  - (a) What are the domain and range of  $f$ ?
  - (b) Write an explicit equation for  $f^{-1}(y)$ .
  - (c) What are the domain and range of  $f^{-1}$ ?
  - (d) Verify explicitly that  $f^{-1}(f(x)) = x$  for every  $x$  in the domain of  $f$ .
  - (e) Verify explicitly that  $f(f^{-1}(y)) = y$  for every  $y$  in the range of  $f$ .
3. Let  $a \in \mathbb{R}$ . Let  $f$  be a differentiable function at  $a$ . Assume  $f'(a) \neq 0$ . Let  $b = f(a)$ . Then you know that  $f^{-1}$  is differentiable at  $b$  and

$$(f^{-1})'(b) = \frac{1}{f'(a)}. \quad (1)$$

Now assume  $f$  has all its derivatives. It follows that  $f^{(-1)}$  also has all its derivatives (you do not need to prove this).

Find equations similar to (1) for  $(f^{-1})''(b)$  and  $(f^{-1})'''(b)$  in terms of the derivatives of  $f$  evaluated at  $a$ . You can do this in at least two ways. Either take derivatives (carefully!) from Equation (1) or differentiate the equation  $f(f^{-1}(x)) = x$  multiple times.

4. Compute the derivatives of the following functions:
  - (a)  $f(x) = e^{3x+1}$
  - (c)  $f(x) = e^{\tan e^x}$
  - (e)  $f(x) = x^{x^x}$
  - (b)  $f(x) = \ln(\cos x)$
  - (d)  $f(x) = x^{\sin x} + x^{\cos x}$
  - (f)  $f(x) = \log_x 3$
  - (g)  $f(x) = \sqrt{1-x^2} + x \arcsin x$
5. In Video 4.14 we left it for you to complete the definition of arccos.
  - (a) Give a full definition of arccos
  - (b) What are the domain and the range of arccos?
  - (c) Sketch its graph
  - (d) Complete the statement at time 4:01 in Video 4.14.
6. Imitate the derivation in Video 4.13 to prove that

$$\frac{d}{dt} [\arctan t] = \frac{1}{1+t^2}$$

7. Compute

(a)  $\arcsin \sin 3$

(b)  $\arccos \cos 3$

(c)  $\arctan \tan 3$

8. Sketch the graphs of the following functions

(a)  $f(x) = \sin \arcsin x$

(c)  $f(x) = \arcsin \sin x$

(b)  $f(x) = \tan \arctan x$

(d)  $f(x) = \arctan \tan x$

9. Let  $f$  and  $g$  be functions. For simplicity, assume they both have domain  $\mathbb{R}$ . Two of the following statements are true, and one is false:

(a) IF  $f$  and  $g$  are one-to-one, THEN  $g \circ f$  is one-to-one.

(b) IF  $g \circ f$  is one-to-one, THEN  $g$  is one-to-one.

(c) IF  $g \circ f$  is one-to-one, THEN  $f$  is one-to-one.

Which one is false? Show it with a counterexample. Which ones are true? Prove them.

10. For each  $k \in \mathbb{Z}$ , let  $I_k$  be the largest interval containing  $k$  such that the restriction of  $\sin$  to  $I_k$  is one-to-one, and let  $\alpha_k$  be the inverse of that restriction. For example,  $\alpha_0 = \alpha_1 = \arcsin$ , but  $\alpha_2$  is a different function.

(a) Sketch the graphs of  $\alpha_2$  and  $\alpha_6$ .

(b) Calculate  $\alpha_2(\sin 1)$  and  $\alpha_6(\sin 1)$ .

(c) Obtain an equation for the derivatives of  $\alpha_2$  and  $\alpha_6$ .

*Note:* You should get two different answers.

## Bonus question: hyperbolic functions

11. The “hyperbolic sine” ( $\sinh$ ) and the “hyperbolic cosine” ( $\cosh$ ) functions are defined by the equations:

$$\cosh(x) = \frac{e^x + e^{-x}}{2}, \quad \sinh(x) = \frac{e^x - e^{-x}}{2}.$$

- (a) Compute  $\cosh'(x)$  and  $\sinh'(x)$ .
- (b) Prove that for all  $x \in \mathbb{R}$ ,  $\cosh^2(x) - \sinh^2(x) = 1$ .
- (c) The function  $\sinh$  is one-to-one. (You may assume so). Its inverse function is called “hyperbolic arc sine” ( $\operatorname{arcsinh}$ ). Use a theorem from Video 4.4 to prove that  $\operatorname{arcsinh}$  is differentiable without doing any calculations.
- (d) Find an explicit formula for  $\operatorname{arcsinh}(y)$  by solving for  $x$  in the equation  $\sinh(x) = y$ .  
*Note:* If you are having trouble finding an expression for the inverse, consider the following easier questions first:
  - Solve for  $t$ :  $t^2 + 6t + 4 = 0$ .
  - Solve for  $u$ :  $e^{2u} + 6e^u + 4 = 0$ .
  - Solve for  $u$ :  $e^{2u} + 6ae^u + 4 = 0$ .
- (e) Use your answer to Question 11d to obtain a formula for  $\operatorname{arcsinh}'(y)$ .
- (f) There is a faster way to obtain a formula for  $\operatorname{arcsinh}'(y)$  without having to obtain an explicit formula for  $\operatorname{arcsinh}(y)$  first! Start with the identity

$$\sinh(\operatorname{arcsinh}(y)) = y,$$

take the derivative with respect to  $y$  on both sides, and use Questions 11b and 11a to obtain a formula for  $\operatorname{arcsinh}'(y)$ . This should agree with your result to Question 11e.

## Some answers and hints

2. (a) The domain of  $f$  is  $(-\infty, -1) \cup (-1, \infty)$ . The range of  $f$  is  $(-\infty, 1) \cup (1, \infty)$ .  
(b)  $f^{-1}(y) = (2 - y)/(y - 1)$
3. 
$$(f^{-1})''(b) = \frac{-f''(a)}{(f'(a))^3}, \quad (f^{-1})'''(b) = \frac{-f'''(a)f'(a) + 3(f''(a))^2}{(f'(a))^5}.$$
4. (a)  $f'(x) = 3e^{3x+1}$   
(b)  $f'(x) = -\tan x$   
(c)  $f'(x) = e^{x+\tan(e^x)} \sec^2(e^x)$   
(d)  $f'(x) = x^{\sin x} \left[ \frac{\sin x}{x} + \cos x \ln x \right] + x^{\cos x} \left[ \frac{\cos x}{x} - \sin x \ln x \right]$   
(e)  $f'(x) = x^{x^x+x} \left[ (\ln x)^2 + \ln x + \frac{1}{x} \right]$   
(f)  $f'(x) = \frac{-\ln 3}{x(\ln x)^2} = \frac{-\log_x 3}{x \ln x}$   
(g)  $f'(x) = \arcsin x$
5. (a)  $\arccos$  is the inverse function of the restriction of  $\cos$  to  $[0, \pi]$ .  
(b) The domain of  $\arccos$  is  $[-1, 1]$ . The range is  $[0, \pi]$ .  
(c) Use desmos to verify your answer.  
(d) For all  $0 \leq x \leq \pi$  and for all  $-1 \leq y \leq 1$ ,  $x = \arccos y \iff y = \cos x$ .
7. (a)  $\pi - 3$  (b)  $3$  (c)  $3 - \pi$
8. All four graphs should be different.
- (a) Analyze the function first when  $-\pi/2 \leq x \leq \pi/2$ . Then analyze it for all other values.  
(c) Sketch the graph first when  $-\pi/2 \leq x \leq \pi/2$ . Then when  $\pi/2 \leq x \leq 3\pi/2$ . Then when  $3\pi/2 \leq x \leq 5\pi/2$ . Then think of the full graph.
9. (b) is false.
10. (b)  $\alpha_2(\sin 1) = \pi - 1$ ,  $\alpha_6(\sin 1) = 1 + 2\pi$ .  
(c)  $\alpha_2'(x) = \frac{-1}{\sqrt{1-x^2}}$ ,  $\alpha_6'(x) = \frac{1}{\sqrt{1-x^2}}$ .
11. (a)  $\cosh'(x) = \sinh(x)$ ,  $\sinh'(x) = \cosh(x)$ .  
(d)  $\operatorname{arcsinh}(y) = \ln \left( y + \sqrt{1+y^2} \right)$   
(e)  $\operatorname{arcsinh}'(y) = \frac{1}{\sqrt{1+y^2}}$
